DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2-4 and 7-9, drawn to a probe for connecting to a device under test, classified in class 324, subclass 754.
- II. Claim 5, drawn to correcting errors in signals measured by a probe, classified in class 702, subclass 104.
- III. Claim 6, drawn to displaying a representation of a signal of a device under test, classified in class 702, subclass 67.

Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a method for evaluating probe output signals for correcting errors. See MPEP § 806.05(d).

Inventions III and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as a method for displaying a representation of a device under test. See MPEP § 806.05(d).

separately usable. In the instant case, invention III has separate utility such as a method for displaying a representation of a device under test. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Gerald Joyce on October 14, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.
